## Projects

### UPI Offline Mesh

GitHub

*Java 17, Spring Boot, Cryptography (RSA/AES-GCM), Concurrency, JPA*

- Designed a Spring Boot backend simulating offline peer-to-peer UPI payments routed through an untrusted, gossip-based mesh of intermediary devices.
- Implemented hybrid RSA-2048 + AES-256-GCM encryption so intermediary devices can neither read nor tamper with transaction data; tampering is detected before decryption.
- Solved concurrent duplicate-settlement using atomic compare-and-set idempotency on the ciphertext hash, verified by a multithreaded JUnit test asserting exactly-once settlement.

### Blog Platform API — Backend

GitHub | Live

*Java 21, Spring Boot, PostgreSQL, Redis, JWT, Docker, Swagger v3*

- Built a RESTful blog platform (posts, comments, likes, dual pagination) with JWT authentication and role-based ownership checks, validated by unit and integration tests (JUnit 5, Mockito, Testcontainers) against real PostgreSQL and Redis containers.
- Diagnosed and resolved an N+1 query bottleneck using batched aggregate queries and eager-fetch joins, cutting average response time from 5.4s to 469ms (~11.5x) across 90 benchmarked requests.
- Implemented Redis caching (cache-aside pattern) with TTL-based expiry and pattern-based invalidation on writes, further reducing average response time to 209ms; containerized with Docker and deployed on Render.

### TBS Veda — Full-Stack E-Commerce Platform

Live

*React.js, TypeScript, Spring Boot, Razorpay, MongoDB, Radix UI, JWT, Docker, Vercel*

- Built a production-ready e-commerce platform (17+ pages, 500+ products) with a Spring Boot backend exposing a domain-driven REST API of 30+ endpoints across auth, products, orders, payments, reviews, and notifications.
- Integrated Razorpay with secure order creation and signature verification, cutting checkout friction by ~40% vs. redirect-based flows; implemented JWT auth (Spring Security), a coupon system, and an Admin Dashboard managing products, categories, brands, and orders across 10+ API modules.
- Designed 48+ reusable Radix UI components (React) with Framer Motion animations, and used Spring Boot's JavaMailSender (SMTP) for transactional and newsletter emails.

## Experience

### Cognifyz IT Solutions Pvt. Ltd.

Remote

*Java Development Intern*

*Jun 2026 – Jul 2026*

- Built multi-threaded Java applications (synchronization, locks, concurrent resource handling) and a socket-based chat application using client-server architecture.
- Developed a currency converter with live exchange-rate API integration and JSON parsing, and a file encryption/decryption tool using Java file I/O.

## Technical Skills

**Languages:** Java, SQL, JavaScript

**Backend & Frameworks:** Spring Boot, REST APIs, Spring MVC, Spring Data JPA, Spring Security, Spring Cloud

**Frontend:** React.js, Redux Toolkit, React Router, Tailwind CSS,

**Databases & Caching:** PostgreSQL, Redis, H2 Database, MongoDB

**DevOps & Tools:** Docker, Git/GitHub, Maven, Linux, AWS (EC2, S3), CI/CD (GitHub Actions)

**Architecture:** Microservices, API Gateway, Service Discovery (Eureka), Circuit Breaker (Resilience4j)

**Security & Cryptography:** JWT, Role-Based Authorization, Stateless Sessions, RSA/AES-GCM Encryption

**API & Testing:** Swagger v3, Postman, JUnit, Mockito, Testcontainers

## Education

### Veer Bahadur Singh Purvanchal University

Jaunpur, India

*Bachelor of Technology (B.Tech) — Information Technology*

*2023 – 2027*
